

ELECTRIC ESCAPES

On the **Allstar** electric charging network

ALLSTAR CHARGEPASS®

Allstar Chargepass® is the UK's only fleet payment solution that does it all: fuel, public charging, home charging, reporting, controls and so much more.

The Chargepass card can be used across the largest combined fuel and electric charging network in the UK, which means there's always an Allstar-accepting site nearby on your drivers' journeys, helping reduce route deviation and downtime.

Fast business needs even faster charging

Don't let charging worries slow your drivers down. Thanks to Chargepass, your drivers can pay for business EV charging at the UK's largest & fastest electric charging network including Tesla Superchargers, ChargePlace Scotland, InstaVolt, Gridserve plus many more.

Want to get started with Allstar Chargepass?

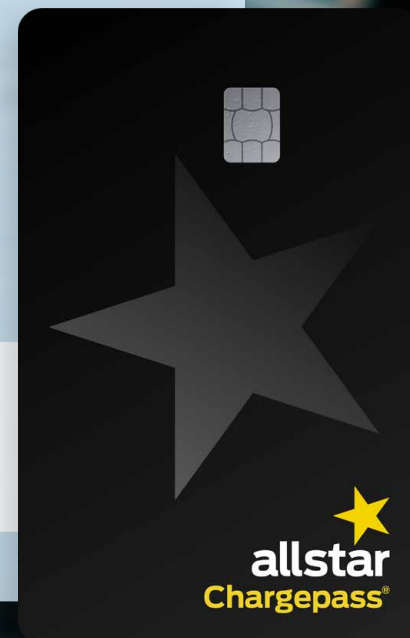

Just use one of the links below. We can power your business payments no matter where you are on the journey to electric vehicles.

website: www.allstarcards.co.uk

“Welcome to Electric Escapes, celebrating the far-reaching Allstar Chargepass® electric charging network for business payment solutions. We’re proud that **Chargepass is the largest and fastest network in the UK, going further than John O’ Groats and Land’s End. Chargepass drivers can charge at over half of the country’s public charging locations, as well as **90% of the major fuel brands and supermarkets**.**

“And with that ability to charge across the UK, comes the ability to charge at some of the most beautiful locations with some spectacular views while drivers can take a break, check emails or make calls to continue their working day.

“We’ve whittled our list of favourites down to 12 locations across our network; starting the journey in the Shetland Isles in Scotland before travelling south through Northern Ireland, England and Wales.

“We know how important it is to take a break if driving long distances or for long periods at a time. Driver’s route takes them past their favourite Allstar-accepted charger, why not encourage them to stop to top up, take a quick snap and share on any social channel using **#AllstarElectricEscapes**. Take the time to recharge their batteries while their vehicle does the same.

And if you’re more interested in the **cost differences over the aesthetics of the regions, download our latest AllCosts report** - you may be surprised to read about the geographical variations between charge points prices throughout the UK.”
